Summary

Data scientist at Banco Guayaquil, where I have worked in retail banking analytics since 2018. I build models for churn and retention, customer lifetime value (CLV), next best offer, transaction network analysis, and natural language processing with embeddings. I work daily with Python, R, SQL, PySpark, and Databricks. Master's in Data Science from Pontificia Universidad Católica de Chile (2026), engineering degree in Statistics and Computing from ESPOL, and co-author of a paper in *ACS Omega*.

Experience

Banco Guayaquil S.A. Nov 2018 – present
Guayaquil, Ecuador · Data Analytics, Retail Banking Tribe

Data Scientist Jan 2025 – present
Senior Officer Apr 2023 – Dec 2024
Officer Nov 2018 – Mar 2023

- **Primary Bank Model** 2025 Designed and built a model that identifies customers who use the bank as their primary financial institution, combining factor analysis, XGBoost, feature engineering on transaction data, and centrality in money-transfer networks.
  PySpark · Databricks · Hive · XGBoost · NetworkX · igraph
- **Sentiment analysis of customer communications** 2025 Built an NLP pipeline on customer messages with OpenAI embeddings and dimensionality reduction (PCA, ICA) to classify messages and detect patterns.
  Python · R · OpenAI API
- **Return on Experience** 2025 Developed econometric models that measure how profitability (ROA, ROE) responds to CSAT and NPS: a framework to estimate the return on digital experience improvements.
- **Customer Lifetime Value** 2023 Built customer value estimation across deposits and loans: survival analysis for customer lifetime and regression to project financial behavior.
  R · survival · earth · XGBoost · Sparklyr
- **Next Best Offer from product adoption paths** 2023 Modeled recommendations from product adoption patterns and acquisition sequences, for cross-selling and retention campaigns.
- **Multi-product churn** 2022 Predicted churn in insurance, deposits, and other products with GLMNET and XGBoost; spending profiles and customer segmentation.
  R · GLMNET · XGBoost · Sparklyr
- Corporate deposit forecasting with transaction data and graphs; demand and sustainability of neighborhood banking agents (Bancos de Barrio); data collection through web scraping and APIs; automation of Risk department processes.

Education

Master's in Data Science conferred Apr 2026
Pontificia Universidad Católica de Chile · Magíster en Ciencia de Datos

Big data architecture (Spark, Hadoop), machine learning and deep learning, Bayesian methods, AI ethics, and model explainability.

Engineering degree in Statistics and Computing 2012 – 2017
Escuela Superior Politécnica del Litoral (ESPOL), Ecuador · Ingeniero en Estadística Informática

Thesis (in Spanish): structure of Ecuador's income distribution with robust quantile regression (ESPOL repository).

Research and teaching

ESPOL — Research Assistant May – Oct 2021
Escuela Superior Politécnica del Litoral, Guayaquil

Methodology, validation, and formal analysis for the study published in *ACS Omega* (2023).

ESPOL — Teaching Technician Jul 2017 – Sep 2018
Faculty of Natural Sciences and Mathematics

Forecasting of student demand and course pass rates (XGBoost, time series); pre/post analysis of physics learning (FCI, RMSS).

Early experience 2014 – 2016

Statistics assistantships at ESPOL (Graduate School and Center for Statistical Studies and Research); internships at INAMHI (National Institute of Meteorology and Hydrology) and Hospital León Becerra.

Publication

Bustos, D.; Galarza, C.; **Ordoñez, W.**; Brauchi, S.; Benso, B. (2023). Cost-Effective Pipeline for a Rational Design and Selection of Capsaicin Analogues Targeting TRPV1 Channels. *ACS Omega*, 8(13), 11736–11749. doi.org/10.1021/acsomega.2c05672

Contribution (CRediT): methodology, validation, formal analysis, review and editing.

Skills, certification, and languages

Programming: Python, R (advanced), SQL.

Big data: Apache Spark, PySpark, Sparklyr, Databricks, Hive, Hadoop.

Modeling: XGBoost, GLMNET, regression and quantile regression, survival analysis, time series, segmentation, factor analysis, graph analytics.

NLP and generative AI: OpenAI embeddings and API, sentiment analysis, PCA and ICA; AI-assisted development with Claude and Codex, prompt design; working knowledge of agents, skills, and MCP.

Visualization: Power BI, Tableau, R Shiny, ggplot2, Matplotlib, Plotly.

Data and processes: SQL Server, PostgreSQL, MySQL, MongoDB, ETL, Git; Scrum.

Certification: SCRUM Master Professional Certificate (SMPC), Certiprof, 2019.

Languages: Spanish (native) · English (B1, CEFR).

Professional and academic references available upon request.
